Product Certification System Type:

There are two product certification systems operated by SGS North America, Inc.

The first product certification system operated by this organization most closely resembles that described by ISO/IEC Guide 67, Conformity assessment — Fundamentals of product certification, System 1a. The program includes the evaluation of samples requested by the certification body, determination of characteristics by testing or assessment (the sampling may or may not be statistically significant of the entire population of product), evaluation of the test or assessment report and a decision on certification. This type of certification system typically does not include the issuance of a license for use of a certification mark or surveillance activity. They will use system 1a for certification of a batch of product (i.e., Limited Production Certification) covering the full scope of products outlined below.

The second product certification system operated by this organization most closely resembles that described by ISO/IEC Guide 67, Conformity assessment — Fundamentals of product certification, System 3. The program includes the evaluation of samples requested by the certification body, determination of characteristics by testing or assessment, initial assessment of the production process or the quality system, as applicable, evaluation of the test and assessment reports, license, on-going surveillance by testing or inspection of samples from the factory as well as on-going surveillance of the production process. They will

use System 3 for certification of products with ongoing production covering the full scope of products outlined below.
