

Note: This scope of accreditation is also available in French as a separately issued document.

The following is a Scope of Accreditation for which this testing laboratory has been accredited to ISO/IEC 17025:2017. Note that the parent organization is also accredited as a certification body. The parent organization's Scope of Accreditation for certification activities may be broader than the listing of standards and test methods that appear below. Refer to the parent organization's Scope of Accreditation granted by the SCC for certification activities found at:

<http://www.scc.ca/en/accreditation/product-process-and-service-certification/directory-of-accredited-clients>

Where standards, such as product standards, are listed below, the laboratory is considered accredited only for the testing elements in those standards.

TEST METHOD DEVELOPMENT & EVALUATION AND NON-ROUTINE TESTING

Note: Laboratories accredited under this Program Specialty Area have demonstrated that they meet ISO/IEC 17025 requirements for routine testing under the same product classification as described below.

Athletic Banned Substances in Ingredients and Finished Products for Dietary Supplements, Functional Foods and Drinks

Includes compounds in the categories of diuretics, steroids, stimulants, beta-agonists, masking agents, hormone antagonists, drugs of abuse and similar banned substance categories.

Description of Activities:

The NSF International Chemistry Laboratory analyzes ingredients and finished products for dietary supplements, functional foods, including nutritional drinks and bars for athletic banned substances in parts per billion levels (ppb) in support of client requests by using validated methods or modifying/adapting and verifying existing methods. Methods are qualitative/semi-quantitative and are validated for presence-absence decisions in a variety of sample matrices. The laboratory develops and verifies mass spectral techniques for the confirmation of the identity of athletic banned substances.

Techniques for which the laboratory is accredited:

1. Sample preparation, extraction, separation and general chemical practices for clean-up of samples prior to instrumental analysis.
2. Gas chromatography - Tandem Quadruple Mass Spectrometry (GC-MS-MS)
Includes the following methods and those for other analytes using similar procedures:
NSF SOP #7667 - Analysis of Anabolic Steroids In Dietary Supplements and Functional Foods by GC-MS-MS
NSF SOP #18148 - Screening g-Hydroxybutyric Acid (GHB) in Dietary Supplements, Functional Foods and Energy Drinks by GC-MS/MS
3. Liquid chromatography - Tandem Mass Spectroscopy (LC-MS-MS)

Includes the following methods and those for analytes using similar procedures:

- NSF SOP #8688 - Analysis of Stimulants in Dietary Supplements and Functional Foods by LC-MS-MS
